Pre-Production Planning for Low-to-No Budget Films

How to open the PDF's on an iPad

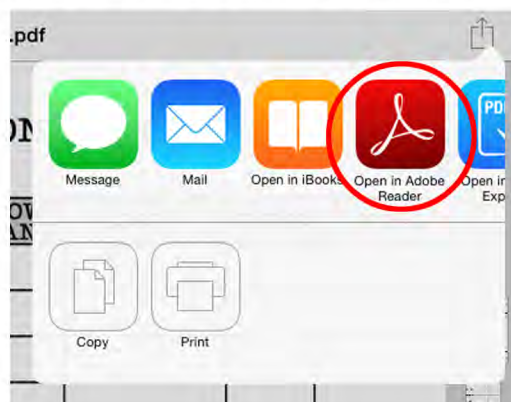

Email the PDF you want to use to your iPad. When you open the email on your iPad, your attachment should look like this:

Double-click on the attachment and it will bring up an image of the PDF. Tap the screen once to make the share icon to show in the upper right corner:

Clicking on the Share Icon will bring up the sharing options. Click on the “Open in Adobe Reader” icon. (Of course, you will need to install the Adobe Reader app for this option to appear.)

Depending on how old your iPad is, it may take several seconds for the Adobe Reader app to open the file. Once open, you will be able to edit the fields as you can on your computer, however, older iPads may respond very slowly, so the best use for these PDF's on an iPad is for reviewing the information and making minor changes. Initial filling out of the forms can be done much more quickly on a computer.

PLEASE NOTE: These PDF's have not been tested on other tablets or similar devices, so no guarantee is made that they will work on them.
